

Cobalt

Special properties - It is a hard ferromagnetic, silver-white, lustrous, brittle element. It is stable in air and does not react with water. Like other metals, it can also be magnetized. With dilute acids, it reacts slowly.

Application - Aircraft engines, gas turbines, high-speed steels, corrosion-resistant alloys, catalyst for the petroleum and chemical industries. It is used by craft workers in porcelain, stained-glass pottery, enamel jewellery, and tiles.
